

Complete Solids Management

Evolving with the New Oil and Gas Industry

With over 20 years of experience, PMI Energy Services is a leader in the energy services field, providing a full range of cleaning, environmental, and other oilfield services solutions. Our team of dedicated, hard-working professionals is committed to providing customers with safe, effective and cost-efficient solutions that meet their individual needs. At PMI, we ensure our team is deeply experienced and highly trained to provide quality service and technical expertise to help our customers every need. PMI's broad service lines support offshore and land operations in the Gulf of Mexico and Lower Mid-Continent Basins.

A Modern Group Company
The Modern Group is a strong family of leading industrial equipment companies. These companies serve a broad variety of industries, including oil and gas, agriculture, power generation, storage and transportation. Yet all Modern companies are united by a steadfast set of core values – we build and deliver products of the highest quality, we relentlessly strive to provide outstanding equipment and project support, and we come through for our customers no matter what.

PMI-A Steadfast Partner in Drilled Solids Management

As our industry continues to evolve, we are faced with increasing our responsibility to protect the environment in which we operate providing the most efficient and cost-effective solutions available. At PMI, our objective is to provide the best available solids control equipment on the market, in conjunction with best in class service to our clients. Our open communications with our customers allows for immediate flexibility in rates to adjust for market fluctuations, insuring that our clients are operating in the most cost-effective manner possible. Our mission, investigate and determine the best technology offered, acquire the best engineered assets from the best manufacturers only and offer the best possible pricing. By deploying only these units, we are able to increase our volume of spare parts while decreasing SKU numbers. We do not stock only one or two of the same part from various equipment manufacturers for the hundreds of different unit models required by our competitors because of their "hodge podge" of pre-owned equipment inventory. We will always have any part on location or stocked locally, keeping our inventory costs to a minimum and passing that savings on to our customers.

Big Bowl and Medium Bowl Centrifuges

Drying Shaker Arrangements

Vertical Cuttings Dryers

Dewatering

Rentals

Solids Management and Fluid Control Benefits

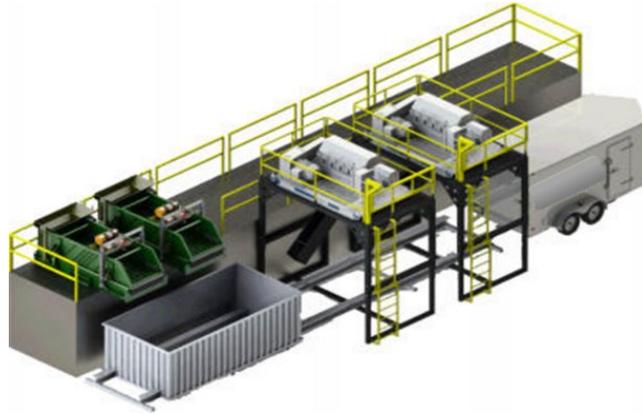

- **Reduced disposal and trucking costs**
By reducing oil on cuttings to less than 3% OOC by wt. and a .4:1 MtC ratio disposal costs can be cut to over 1/3
- **Reduced drilling fluid costs**
The use of drying shakers reclaims 20% of mud typically lost to drill cuttings. In turn, a vertical cuttings dryer historically recovers 50% of mud typically lost
- **Reduction from Environmental Exposure**
Fewer trucks on the highway traversing to and from the rig site substantially reduces the opportunity for spills
- **Increase penetration rates**
Reducing the correct solid particles through centrifugation enhances ROPs
- **Improved hole cleaning**
- **Reduced tool wear**

Principles for Success

Time matters to us. PMI deploys only the most user-friendly equipment available. Our drying shaker package, for example, is designed for the shakers to ship mounted atop the shaker tank. The shakers are mounted on rails and are simply skidded into position to match the rig shakers upon arrival on location. No need for a crane or tying up additional rig personnel and equipment to assist with install. This design also keeps additional third-party welding and fabrication to a minimum during rig up.

Maintenance matters to us. For vertical cuttings dryer preference, PMI's fully-integrated, turn-key, cuttings waste management unit is the industry's most sophisticated cuttings drying system available. The total package is configured onto a single skid for ease of installation. The system is fitted with a rotatable feed auger as well as a retractable discharge auger, resulting in the most compact, space reducing vertical cuttings dryer arrangement available. By incorporating a new "grease for life" gear bearing, the oiler pump, oil reservoir, filtration, and pressure switch have been eliminated requiring less maintenance allowing personnel to focus primarily on what we were hired to do!

FVS Centrifuges

2077
20" x 77" Bowl
